

mounting clamps

Metal mounting clamp (MC) is designed for mating and sealing of air ducts.

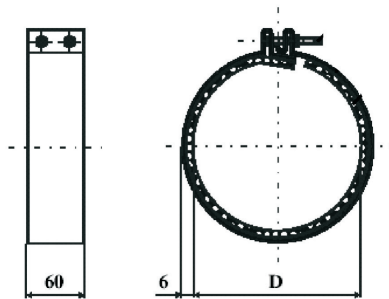

The clamp represents a thin steel strip with adhesive layer of cellular sealing rubber on one side.

The clamp is mounted at air duct joints by screws and tightened.

Tightening torque is transferred to a layer of sealing rubber; rubber is press-fit to an air duct joint thus ensuring required sealing.

Dimensional data

MC weight values	
Diameter,mm	Weight,kg
100	0.25
125	0.3
160	0.35
200	0.4
250	0.5
315	0.6
